

Third-party and open-source model-sharing repositories have been born out of inherent data science complexity, practitioner shortage & the limitless potential & value they provide to organizations - dramatically reducing the time & effort required for AI adoption. However, such repositories often lack comprehensive security controls, which ultimately passes the risk on to the end user – & attackers are counting on it. The scarcity of security around AI models, coupled with the increasingly sensitive data that

Al models are exposed to, means that model hijacking attacks evade traditional

security solutions & have a high propensity for damage.

HiddenLayer Model Scanner analyzes models to identify hidden cybersecurity risks & threats such as malware, vulnerabilities & integrity issues. Its advanced scanning engine is built to analyze your artificial intelligence models, meticulously inspecting each layer & components to detect possible signs of malicious activity, including malware, tampering & backdoors.

HiddenLayer Model Scanner is easy to use by simply uploading your model to the Web-based Product Interface or HiddenLayer APIs will automatically analyze it for any security risks. It provides detailed reports on the findings, including recommendations on how to fix any issues & improve the model's security posture.

With HiddenLayer Model Scanner, you can ensure the integrity & safety of your artificial intelligence models, protecting them from any potential cyber threats. Whether you're a data scientist, artificial intelligence engineer, or a business leader, Model Scanner is the essential tool for securing your artificial intelligence assets.

## **KEY PRODUCT CAPABILITIES**

- Malware Analysis Scans Al Models for embedded malicious code that could serve as an infection vector & launchpad for malware
- Vulnerability Assessment Scans for known CVEs & zero-day vulnerabilities targeting AI Models
- Model Integrity Analysis of Al Model's layers, components & tensors to detect tampering or corruption.
- Uses a combination of supervised learning, unsupervised learning, dynamic/behavioral analysis & static analysis to deliver detection for a library of adversarial machine learning attacks
- Catalog a Known-Good State of your Al Models as a baseline for identifying future tampering
- Supports a variety of AI Model file types:
  - Joblib · Cloudpickle
- ONNX
- Safetensor

TensorFlow

- Dill
- ° Keras ° NeMo
- ° Pickle PyTorch
- Skops

- · GGUF • HDF5
- Numpy
- ۰R
- Zip

## KFY BENEFITS

- · Ensure third-party & open source AI models hosted by online communities & repositories are safe & secure to use by scanning the URL
- Prevent inheritance of cybersecurity vulnerabilities, malware & corruption via transfer learning of open-source AI Models
- Ensure Al Models are free of vulnerabilities & malware before deploying to production
- Improve the security & integrity of proprietary models & protect your company's intellectual property
- Prevent AI Models from being a launch pad for malware

AWS Marketplace

Google Cloud Platform

## Why HiddenLayer?

offers turnkey Al security without requiring increased model complexity, access to sensitive training data, or visibility into the Al assets.
